

## MICROBIOLOGICAL ENVIRONMENTS

# ENVIRONMENTAL MONITORING

Microbiological Environments is a full service microbiology laboratory testing and consulting service. We are primarily dedicated to the design, implementation and conduct of environmental monitoring programs

- Concept and Design of Environmental Monitoring Programs
- Onsite Environmental Monitoring Testing
- Calibrated Sampling Equipment Rental
- Analysis and Reporting of Environmental Monitoring Results
- Evaluation and Trending of Environmental Monitoring Data
- Contamination Control and Remediation
- SOP and Protocol Development

Microbiological Environments has over 35 years experience in design, installation, validation and quality control of Production Environmental Monitoring Programs.

Our sampling and testing programs are flexible and can be designed to meet small-scale needs as well as the critical requirements of larger scale pharmaceutical and medical device operations. We will evaluate your facility for likely microbial sources, harbors and potential contamination and control problems, then develop sampling plans with a compendium based rationale for site selection and quantity of samples taken.

We can design and provide color-coded sampling plan maps for quick and easy reference to site and sample types.

Our database systems are highly detailed yet flexible enough to catalogue and trend organisms according to gram stain/colony type, genus or species. Trending and setting of ALERT and ACTION levels may be done using any of a variety of accepted statistical methods or they may be set in accordance with you or your client's requirements.

We also realize that communication is vital to an effective program; our program assures that at the first indication of an exceeded concern level, our clients are notified immediately via their preferred method(s) of contact. We will conduct any additional required testing and assist you with finding the cause or source of the contamination episode.

*Expertise and Reliability in Environmental  
Monitoring and General Microbiological Testing*
