

MICROBIOLOGICAL ENVIRONMENTS

ON-SITE ENVIRONMENTAL MONITORING & TRAINING

Our precision in sampling technique and attention to sample plan detail reflect over 35 years experience in conducting critical sampling programs.

Our trained sampling staff can be scheduled for routine on-site sampling sessions; and we will be "on call" for emergency or post-remediation re-sampling sessions.

Testing is performed using state of the art sampling equipment and microbiological media manufactured and controlled by world renowned suppliers.

Our equipment is calibrated with NIST traceable standards.

We can provide CGMP training of your staff in:

- Proper cleanroom behavior
- Proficiency in aseptic handling and sampling
- Proper use and maintenance of equipment
- Proper sampling technique
- Awareness of sources and harbors
- Proper gowning technique
- Packaging and submission of samples to MICROBIOLOGICAL ENVIRONMENTS for evaluation and reporting.

MICROBIOLOGICAL ENVIRONMENTS can also provide you with calibrated sampling equipment, traceable to NIST standards. All media is provided with a manufacturer's certificate of analysis. In addition, we perform a quality control check of the media before it is sent to the client and after it is returned to our laboratory to verify that shipping and handling conditions did not affect media integrity. Equipment can be sent to you via overnight delivery for your trained personnel to sample your environment:

- RCS Air Sampler
- RCS Plus Air Sampler
- SAS Air Sampler
- Contact Plates
- RCS Air Strips
- TSA Plates
- Swabs
